Business Voice Specialists

We are your Business Voice Specialists, offering a pain-free cloud-based phone service to replace your outdated PBX. Our platform knowledge and pricing is comparable to the Big Brands, our support is what you'd expect from your neighborhood business.

“ I've been extremely impressed with the team that I've been working with. The service has been everything I had expected and more. I'm looking forward to using our new system, expanding it to our other locations, and to our continued business [together]. ”

Our Difference

We deliver VoIP/Cloud phone services the way it was meant to be delivered: a well-designed, business-class voice and unified communications (UCaaS) experience anywhere, anytime, to any device within the assigned network.

We care about your experience and provide hand-holding support from start to finish. Starting with implementation, our experienced Project Managers do all of the programming and portal set-up for you. Our Level-3 IT Engineers assist with network design, network set-up, new switch installation (if needed), and VLAN set-up. We provide a smooth installation and support experience for you, including end-user training for all users.

Get all the features that you would want in an always-connected world, which is imperative to ensure you receive unified accessibility and experiences across all devices.

We provide a full-featured and flexible hosted-voice solution built on an enterprise-class cloud-based unified communications (UCaaS) platform that puts you in control of your communications. We've built our reputation on delighting customers with quality service and no-fault support.

Work from Anywhere

With our Mobile and Desktop Apps, you are free to access your business phone service from anywhere, at any time.

Cost-Effective

Our Cloud-based solutions are more cost-effective versus the traditional expensive to maintain legacy options.

Modern

All Users receive executive style desktop phones and access to a state-of-the-art Unified Communication Platform.

Secure

Secure platforms to keep your company information safe, whether in-office or working remotely.

Feature-Rich

Our UCaaS solution combines all communication avenues into one easy-to-use platform. This means all voice, video, messaging, email, and more can all be combined and accessed through one solution that can be access across multiple devices. The following UCaaS features really complement both remote and hybrid workplaces.

UCaaS Features For Remote And Hybrid Workplaces

- **Call Forwarding** – route calls to any connected device while still protecting personal information. This means you can receive a call to your business phone number on your cell phone without the customer learning your personal cell phone # or information.
- **Video Conferencing** – collaboration is made easy with the Axxess UCaaS platform. Workers can schedule video chat, message, screen share, share documents and much more all in real-time as if they were all in the same conference room in-office.
- **Messaging** – real-time SMS/MMS is instantaneous and saves workers time to get the answers they need when they need them.
- **Business SMS Messaging** – send SMS messages to large groups of employees or customers. Everything from appointment scheduling and reminders to special deals for customers can be sent through SMS from secure business lines.
- **MS Teams and CRM/Business App Integration** – easily integrate with Axxess to provide a seamless user experience. Save time and work more efficiently by enabling users to manage their UC through a single pane of glass whether its direct dial routing for Teams or click-to-dial and screen-pop integration with one of the many supported CRM Apps.
